

VUANCE and 3xLOGIC Partner to Provide Integrated Access, Command & Control and Video Management Solutions

QADIMA, Israel - November 10, 2009 – VUANCE, Ltd. (PINK SHEETS: VUNCF.PK) and 3xLOGIC Ltd. have launched a platform integrating command and control, access-control, CCTV, and building-automation. This platform provides complete site status overview and is specifically designed for centralized management of multi-sites where low communication bandwidth is available and also perfectly addresses the complex need at single site installation.

These systems are designed to meet safe-city, education, retail, correctional, corporate, transportation, and other vertical markets that use cutting-edge technology to meet their security requirements.

The joint solution provides fully integrated video system with access-control and command and control solutions creating an event driven Physical Security Information Management (PSIM) system. Comprehensive virtual matrix supporting unlimited number of video streams from IP and megapixel cameras with ePTZ (Electronic PTZ) in live and playback mode enables the operator to take the correct decision. Built in video analytics, two-way-audio, site procedures and activation of unlimited number of PLCs assist in immediate decision making reacting to complex scenes. At the push of a button, it is now possible to instantly freeze pictures and to zoom into scenes by storing them in a local buffer handling. By combining video with the access control solution, it is possible to create a complete door-management, tracking and accountability solution including video surveillance, audio communication, card readers and door controllers.

"Our experience has shown us that effective security management can only be achieved when operators receive all required information," noted Eyal Tuchman, chief executive officer of VUANCE. "This combined offering significantly expands VUANCE's addressable market, providing us with additional solutions with which to meet expanding customer needs. In addition, the relationship enables us to approach 3xLOGIC business partners worldwide and also offer our current customer base expanded packages with state-of-the-art video capabilities, creating additional opportunities for VUANCE within our installed base. We are committed to providing a fully integrated solution with the best of breed components and we are pleased to work with a recognized leader like 3xLOGIC to co-develop this solution."

"Partnering with VUANCE enables us to provide complete security system integration for our customers," added Michael Isakov of 3xLOGIC. "We've always been strong in multi-site remote management and now we will be able to integrate with building security system technologies that include integration of biometrics and visitor management, among other solutions."

About VUANCE, Ltd.

VUANCE, Ltd. develops and markets state-of-the-art security solutions for viewing, tracking, locating, credentialing, and managing essential assets and personnel. VUANCE solutions encompass electronic access control, urban security, and critical situation management systems as well as long-range Active RFID for public safety, commercial, and government sectors. The Company's comprehensive range of products enable our business partners to offer their customers end-to-end solutions that can overcome the most difficult security challenges. Its Incident Response Management System (IRMS) is the industry's most comprehensive mobile credentialing and access control system, designed to meet the needs of Homeland Security and other public initiatives. VUANCE is serious about security.

VUANCE, Ltd. is headquartered in Rockville, MD. Its common stock is listed on the Pink Sheets under the symbol "VUNCF.PK". For more information, visit www.vuance.com.
